

## Week 7 Research

### Prompt 1

Three HTML elements not mentioned in our week 7 videos include `<aside>`, `<code>`, and `<details>`.

- `<aside>` is used to display content off to the side, like a side bar, from the main content. The information contained in the aside should be related to the main content in some way.
- `<code>` is used to display text like it would be seen on a computer output screen. Instead of just saying button the button font show in the browser's default monospace font.
- `<details>` is used to show that additional details are available. This is designed to be interactive, meaning you would have to click to access the additional details.

### Prompt 2

The website I visited is Graced by Glitter. This website is a business page for a small business. The 5 HTML elements I identified include:

- Header and footer
- Images
- Buttons
- Forms
- Datalist
- Headings

### Prompt 3

The highlight of what I have learned this week is coming into the week feeling more confident about the subject. This is because of my previous experience with HTML. I still have so much to learn and while watching the videos and doing the research into HTML elements I have seen some things I am ready to try out in this weeks coding assignment.
